## Adjustment:

Open the units by unscrewing top cover

### Light intensity, P1:

Turning P1 anti-clockwise will decrease the light intensity.

Default value: 100%.

LATAB recommend to reduce the light intensity as much as possible to increase lifetime. 360 degr (1 turn) is equal to about 5%

### Pulse width, SW1:

The strobe pulse width can be set from 50 to 1500 µs by SW1. See table. Factory preset to 1500 µs.

### 200 % intensity, J3:

Installing of the jumper J3 will double the intensity. The strobe pulse will be automatically limited to 100µs to avoid overloading the LEDs.
